LoansPQ is a web-based, automated loan management solution. LoansPQ simplifies the loan process, and delivers a sophisticated, yet simple, means to facilitate your borrowers needs. It is designed for financial institutions to effectively collect loan data, automatically decision the loan, document the loan and cross-sell loan products to your borrowers. It instantly generates pre-qualified loan decisions for mortgage, auto, credit cards, commercial loans, and many other loan products.

Web-based lending is no longer the wave of the future. It is here NOW, and LoansPQ is your link to successful web-based lending. A recent survey of lending institutions by Callahan & Associates shows that “as many as 23% of all loan applications are submitted online. Of these online applications, over half of them are funded.”

If you don't have web-based lending today, ask yourself:

What is it costing my bottom line to NOT link our system with LoansPQ?

Features	
<ul style="list-style-type: none"> ▶ Applicants may save and retrieve applications and check loan status. ▶ Automatic cross-selling of additional loans. ▶ Automated loan decision based on credit, loan data and decision matrix in twenty seconds. ▶ Capture signatures using and electronic signature pad. ▶ Integration of marketing letters and related forms. 	<ul style="list-style-type: none"> ▶ Customizable prequalification engine. ▶ Integrated workflow messaging system. ▶ Secure access provided to employees. ▶ Flexible and scalable loan management system. ▶ Comprehensive administration reporting system. ▶ Seamlessly export loan data to loan origination or core accounting system.

How it Works				
➔	➔	➔	➔	➔
Take loan application data from all channels including web, phone, call center and branch.	Make credit decision based on custom decision matrix, loan data and credit data.	Notify applicant and/or loan officer of decision.	Prepare loan documentation or export data to loan origination system.	Perform optional services such as export data to servicing software, prepare reports and create letters.
